

**We've Been Out There a Fair While**

Since 1992 we've been travelling and training and fixing computers outback. In the early days travel was by motorbike with laptops in a gearsacks and saddlebags on the rear; plus a kit of tools strapped to the petrol tank. Publicly funded trainers were better resourced - they carried their laptops and tools in the back of a ute. Not only have the people had to be tough to survive out here.

**Share the Knowledge, Share the Skills, Learning to Go!**

**What Can You Help Me With?**

We have been taming and training computers for over 15 years. We can

- ✓ sort out many problems over the telephone and by accessing your PC remotely
- ✓ repair your PC either at your place or ours.
- ✓ teach you how to maintain your computer and how to be safe on the Internet
- ✓ teach you how to use many essential programs
- ✓ teach you how to find the help you need online or within the program itself
- ✓ give you the tools you need to help others develop their computer skills
- ✓ give you sensible advice when the equipment needs to go to a specialist technician for repair - so you know what is wrong, what to ask the technician to do - in short you are an informed and educated computer user.
- ✓ provide you with sensible unbiased advice about purchasing hardware and software and give you an understanding of the questions you need to ask when making decisions on IT equipment.

 Call 07 46541616. We are available from 6.30 am - 5 pm, 7 days, but sometimes you may have to leave a message Why? We also conduct computer taming workshops throughout southwest Qld. We will get back to you as soon as possible.

**We will sort it out!**  
At our place, at your place or by remote access. We will teach you how to fix problems yourself, or better still - how to avoid them altogether, how to use your programs & more..  
**We Know Computers**

**Internet Self Defence - IT's up to me ! -**  
In a perfect world the Internet police would be able to instantly track down spammers, scammers and other online riff-raff and bring them to justice while not violating everyone else's right to privacy. None of this is ever going to happen, so  
**IT Self Defence - IT's Up to Me!!** Have a look at [www.mulgatraining.com.au/InternetSecurity.htm](http://www.mulgatraining.com.au/InternetSecurity.htm)

**We Fit In With Your Time**  
Mulga Training Network gives you an honest, reliable & relevant response to computer training, computer technical support and other training needs in remote places. We work in a time and manner that fits in with your lifestyle.

**Take IT Beyond The Boundaries**

We're a bit different in the bush - the city approach to skills development is rarely relevant out here. We like to push the boundaries a bit - go beyond the borders of conventional learning.

**Parent - IT**

ICT looms large in education today. Parents, don't let IT bluff you! Get comfortable with computers. Learn what kids really can and cannot achieve by using computers. A strong family has confident parents guiding kids. Take charge of the kids' computer education.

**Living With Your PC**

Computer Basics, Word, Excel, PowerPoint, Photo Story but not as you've dozed through before.. Advanced Word, Excel,, PowerPoint, Adobe Photoshop, Dreamweaver more.. Graphics - from your photos, from your mind, from the web....your imagination is the only limit.

Download free study guides from the website [www.mulgatraining.com.au/TechSupport.htm](http://www.mulgatraining.com.au/TechSupport.htm)

**Websites:** we can teach you how to build and edit a website. Includes preparing graphics for web display, using file transfer programs to upload the site and keeping the site updated. Check our website for examples

**Learn to Fix Your Computer** - (practice on your Mum's first) - maintain your computer so as to save that expensive trip to town when the cooling fins need cleaning - prerequisite: a sense of adventure

**We're Not Pretty...** We are not government funded so we have no glossy brochures, nor are you the taxpayer supporting several star accommodations, air fares, holidays, conferences in fine resorts, incentive payments for remote area work, well appointed office space etc. The Mulga Mob's equipment is not the latest model; nor are the vehicles or the people for that matter. As part of our hardware training we teach others how to refurbish laptops and desktops. So we can outfit a community learning centre for less than the cost of one meeting of "experts" discussing the "how to's".
